

Name : AKASH SAMPATH

Module : Week\_0\_Lab\_0

---

**Procedure:**

- Create the GitHub Repository
- Open GitHub
- Click create new repository with name

```
intern-notes-akash
```

- Select public and click create repository
- Copy your repository link

```
https://github.com/yourusername/intern-notes-akash
```

- Open CMD , Visual Studio code and click new terminal and run

```
git --version
```

- Clone the repository by going to the folder where your project is created

```
cd Desktop / Project
```

- Copy the GitHub repository URL and do with clone

```
git clone https://github.com/akash123/intern-notes-akash.git
```

- Enter the repository and open it

```
cd intern-notes-akash
```

- Right click the repository folder and create new file and name it as

```
week-0.md
```

So therefore you should have

```
intern-notes-akash [ Folder created ]
|
├── README.md [ Optional ]
└── week-0.md [ File ]
```

- Run the following commands : In order

|                                |                                           |
|--------------------------------|-------------------------------------------|
| git --version                  | GIT                                       |
| docker --version               | Docker                                    |
| java --version                 | JAVA                                      |
| node --version                 | Node.js                                   |
| npm --version                  | NPM                                       |
| git status                     | Check git status                          |
| git add week-0.md              | Add the file by run                       |
| git add .                      | Add everything                            |
| git commit -m "Week 0"         | Commit                                    |
| git push origin main or master | Push to GitHub / Authenticate with GitHub |

- Check your GitHub by refreshing the page and should see

```
intern-notes-akash [ Created folder ]

README.md [ Optional ]
week-0.md [ Create file ] [ Check by clicking this to check content ]
```

- Create the branch as reflection by creating new branch in Visual Studio Code inside and run using

```
intern-notes-akash
git branch [ Should see main ]
```

- Create and switch to the reflection branch and check the branch

```
git checkout -b reflection
git branch [ Should see reflection branch instead
of main ]
```

- Open the file created [ week-0.md ] and give paragraph content and save the file and check what happened using

```
git status
```

- Add the updated file and check the updated file using

```
git add week-0.md
```

```
git status
```

- Commit the reflection by running

```
git commit -m "Add Week 0 reflection"
```

- Push the reflection branch using

```
git push -u origin reflection
```

- Open your repository and check the pushes and pull request and click and also again check the pushes and pull request
