

MASTER DEVOPS COMMAND TABLE

Beginner-friendly command reference — Linux • Git/GitHub • HTTP/curl • Networking • Nginx • Docker • Jenkins • AWS • Spring Boot

#	Category	Command	What it does
1	Basic Terminal / Linux	<code>pwd</code>	Show current directory
2	Basic Terminal / Linux	<code>ls</code>	List files and folders
3	Basic Terminal / Linux	<code>ls -la</code>	List all files with details
4	Basic Terminal / Linux	<code>cd folder</code>	Enter a folder
5	Basic Terminal / Linux	<code>cd ..</code>	Go to parent folder
6	Basic Terminal / Linux	<code>cd ~</code>	Go to home directory
7	Basic Terminal / Linux	<code>clear</code>	Clear terminal
8	Basic Terminal / Linux	<code>mkdir test</code>	Create a folder
9	Basic Terminal / Linux	<code>touch file.txt</code>	Create an empty file
10	Basic Terminal / Linux	<code>cat file.txt</code>	Display file contents
11	Basic Terminal / Linux	<code>echo "Hello"</code>	Print text
12	Basic Terminal / Linux	<code>echo "Hello" > file.txt</code>	Write text to a file
13	Basic Terminal / Linux	<code>cp file.txt backup.txt</code>	Copy a file
14	Basic Terminal / Linux	<code>mv old.txt new.txt</code>	Move/rename a file
15	Basic Terminal / Linux	<code>rm file.txt</code>	Delete a file
16	Basic Terminal / Linux	<code>rm -r folder</code>	Delete a folder
17	Basic Terminal / Linux	<code>whoami</code>	Show current user
18	Basic Terminal / Linux	<code>hostname</code>	Show machine name
19	Basic Terminal / Linux	<code>uname -a</code>	Show system information
20	Basic Terminal / Linux	<code>df -h</code>	Show disk space
21	Basic Terminal / Linux	<code>du -sh folder</code>	Show folder size
22	Basic Terminal / Linux	<code>free -h</code>	Show memory usage
23	Basic Terminal / Linux	<code>top</code>	Live process/resource view
24	Basic Terminal / Linux	<code>ps aux</code>	List running processes

#	Category	Command	What it does
25	Basic Terminal / Linux	kill <PID>	Stop a process
26	Basic Terminal / Linux	history	Show command history
27	Basic Terminal / Linux	date	Show date/time
28	Basic Terminal / Linux	sudo <command>	Run command with admin privileges
29	Basic Terminal / Linux	chmod +x script.sh	Make script executable
30	Basic Terminal / Linux	grep "text" file.txt	Search text in a file
31	Basic Terminal / Linux	find . -name '*.txt'	Find files
32	Basic Terminal / Linux	head file.txt	Show first lines
33	Basic Terminal / Linux	tail file.txt	Show last lines
34	Basic Terminal / Linux	tail -f app.log	Follow a changing log file
35	Git / GitHub	git --version	Check Git version
36	Git / GitHub	git config --global user.name "Your Name"	Set Git username
37	Git / GitHub	git config --global user.email "email@example.com"	Set Git email
38	Git / GitHub	git init	Create a Git repository
39	Git / GitHub	git status	Check repository status
40	Git / GitHub	git add file.txt	Stage one file
41	Git / GitHub	git add .	Stage all changes
42	Git / GitHub	git commit -m "message"	Create a commit
43	Git / GitHub	git log	Show commit history
44	Git / GitHub	git log --oneline	Compact commit history
45	Git / GitHub	git branch	List branches
46	Git / GitHub	git switch -c feature	Create and switch branch
47	Git / GitHub	git switch main	Switch to main branch
48	Git / GitHub	git merge feature	Merge a branch
49	Git / GitHub	git clone <URL>	Clone a remote repository
50	Git / GitHub	git pull	Download and merge remote changes
51	Git / GitHub	git push	Upload commits to remote

#	Category	Command	What it does
52	curl / HTTP APIs	curl --version	Check curl version
53	curl / HTTP APIs	curl https://example.com	Make a basic HTTP request
54	curl / HTTP APIs	curl -i https://example.com	Show response headers + body
55	curl / HTTP APIs	curl -v https://example.com	Show detailed request/response
56	curl / HTTP APIs	curl -I https://example.com	Show response headers only
57	curl / HTTP APIs	curl -X GET https://example.com	Send GET request
58	curl / HTTP APIs	curl -X POST https://example.com	Send POST request
59	curl / HTTP APIs	curl -H "Content-Type: application/json" <URL>	Add HTTP header
60	curl / HTTP APIs	curl -d '{"name":"Akash"}' <URL>	Send request body
61	curl / HTTP APIs	curl -i https://api.github.com/users/torvalds	GitHub API GET example
62	curl / HTTP APIs	curl -v https://httpbin.org/get	Verbose HTTP example
63	curl / HTTP APIs	curl -i -X POST https://httpbin.org/post -H "Content-Type: application/json" -d '{"name":"Akash","week":1}'	JSON POST example
64	curl / HTTP APIs	curl -i "https://httpbin.org/get?role=intern&track=python"	Query parameter example
65	curl / HTTP APIs	curl -i https://api.github.com/users/this-user-does-not-exist-99999	404 API example
66	Networking	ping google.com	Test network reachability
67	Networking	ip addr	Show IP addresses
68	Networking	ip route	Show routing table
69	Networking	nslookup google.com	DNS lookup
70	Networking	dig google.com	Detailed DNS lookup
71	Networking	ss -tulpn	Show listening ports
72	Networking	traceroute google.com	Show network path
73	Nginx	sudo apt update	Update package lists
74	Nginx	sudo apt install nginx -y	Install Nginx
75	Nginx	sudo systemctl status nginx	Check Nginx status
76	Nginx	sudo systemctl start nginx	Start Nginx
77	Nginx	sudo systemctl stop nginx	Stop Nginx
78	Nginx	sudo systemctl restart nginx	Restart Nginx

#	Category	Command	What it does
79	Docker	<code>docker --version</code>	Check Docker version
80	Docker	<code>docker pull nginx</code>	Download Nginx image
81	Docker	<code>docker images</code>	List Docker images
82	Docker	<code>docker ps</code>	List running containers
83	Docker	<code>docker ps -a</code>	List all containers
84	Docker	<code>docker run nginx</code>	Run Nginx container
85	Docker	<code>docker run -d nginx</code>	Run container in background
86	Docker	<code>docker run -d -p 8080:80 nginx</code>	Map host port 8080 to container port 80
87	Docker	<code>docker stop <container></code>	Stop a container
88	Docker	<code>docker start <container></code>	Start a stopped container
89	Docker	<code>docker restart <container></code>	Restart a container
90	Docker	<code>docker rm <container></code>	Remove a container
91	Docker	<code>docker rmi <image></code>	Remove an image
92	Docker	<code>docker logs <container></code>	View container logs
93	Docker	<code>docker exec -it <container> bash</code>	Open shell inside container
94	Docker	<code>docker inspect <container></code>	Inspect container details
95	Docker	<code>docker build -t website .</code>	Build an image
96	Docker	<code>docker run -d -p 8080:80 website</code>	Run custom website image
97	Docker Compose	<code>docker compose version</code>	Check Compose version
98	Docker Compose	<code>docker compose up</code>	Create/start services
99	Docker Compose	<code>docker compose up -d</code>	Start services in background
100	Docker Compose	<code>docker compose down</code>	Stop/remove services
101	Docker Compose	<code>docker compose ps</code>	List Compose services
102	Docker Compose	<code>docker compose logs</code>	View service logs
103	Docker Compose	<code>docker compose build</code>	Build Compose images
104	Docker Compose	<code>docker compose restart</code>	Restart services
105	Jenkins	<code>sudo systemctl status jenkins</code>	Check Jenkins status

#	Category	Command	What it does
106	Jenkins	<code>sudo systemctl start jenkins</code>	Start Jenkins
107	Jenkins	<code>sudo systemctl stop jenkins</code>	Stop Jenkins
108	Jenkins	<code>sudo systemctl restart jenkins</code>	Restart Jenkins
109	Jenkins	<code>sudo systemctl enable jenkins</code>	Start Jenkins automatically at boot
110	AWS / Ubuntu	<code>sudo apt update</code>	Update Ubuntu packages
111	AWS / Ubuntu	<code>sudo apt upgrade -y</code>	Upgrade installed packages
112	AWS / Ubuntu	<code>sudo apt install <package> -y</code>	Install a package
113	AWS / Ubuntu	<code>whoami</code>	Show current AWS server user
114	AWS / Ubuntu	<code>pwd</code>	Show current directory
115	AWS / Ubuntu	<code>ls -la</code>	List files
116	AWS / Ubuntu	<code>df -h</code>	Check disk usage
117	AWS / Ubuntu	<code>free -h</code>	Check memory
118	AWS / Ubuntu	<code>docker ps</code>	Check Docker containers
119	Spring Boot / Docker	<code>docker build -t electricity-backend .</code>	Build backend Docker image
120	Spring Boot / Docker	<code>docker run -p 8080:8080 electricity-backend</code>	Run Spring Boot container
121	Spring Boot / Docker	<code>docker logs <container></code>	Check Spring Boot logs
122	Spring Boot / Docker	<code>docker ps</code>	Check backend container
123	Spring Boot / Docker	<code>docker stop <container></code>	Stop backend container

Important: Replace placeholders such as <PID>, <container>, <image>, <URL>, and <package> with your actual values. Never put real passwords or secrets in GitHub.
